DRP Pull Down Fixtures

Pull Down Fixtures are a set-up tool designed to measure the race car under load as it would be on the track.

Pull Down Fixtures allow the user to:

- Test Set-Up Ideas without Leaving the Shop
- Test Changes in a Controlled Environment
- Find & Fix Problems, such as Suspension Binds or Low Dynamic Bite
- Compare Set-Ups or Different Chassis

Pull Down Fixtures are relatively simple to use and can speed the race car learning curve significantly.

How to Order:

Contact us via phone or email. We will help you determine the best system and options. We then send you an estimate for approval. Orders are placed with a deposit and shipped with final payment.

Tech Tip

Tech Tip

"Grip Loss"

Grip loss is the loss of traction between the tire and the track. Grip loss can be caused by load shearing (spike in wheel load), chassis lift, excessive droop limiter load, excessive sway bar load, camber, air pressure, excessive rebound dampening, suspension binds or aggressive wheel load increase.

Grip Loss vs. Tight or Loose

Grip Loss is the loss of available grip. Tight or Loose is grip imbalance. If not identified, grip loss can be misinterpreted as tight (front grip loss) or loose (rear grip loss).
