Hub Dyno

We operate by the motto "You can't improve what you don't measure." To measure friction in wheel hubs we built a Hub Dyno. Our Dyno will spin the hub under full track load while measuring energy consumed, bearing temperature, RPM & more.

Tech Tip

"Grip Loss"

Grip loss is the loss of traction between the tire and the track. Grip loss can be caused by load shearing (spike in wheel load), chassis lift, excessive droop limiter load, excessive sway bar load, camber, air pressure, excessive rebound dampening, suspension binds or aggressive wheel load increase.

Grip Loss vs. Tight or Loose

Grip Loss is the loss of available grip. Tight or Loose is grip imbalance. If not identified, grip loss can be misinterpreted as tight (front grip loss) or loose (rear grip loss).
